Package sorting
automation that adapts
to your needs.

Adapt to your environment with the

Chameleon[®]

Parcel Processing Solution

The Chameleon[®] Parcel Processing Solution is the only modular equipment solution that makes parcel automation cost effective for rapidly growing operations.

Engineering Innovation's Chameleon Parcel Processing Solution provides parcel automation for any space. Its modular, scalable architecture allows us to adapt the Chameleon Solution to your environment and to your specific parcel processing needs.

Your growing operation can get an affordable automation solution that can shift or change according to volume or market requirements. This processing solution will enhance productivity while reducing shipping and operational expense by assisting you in moving greater volumes through your operation with fewer people and less error.

This package sorting system is a high-speed processing platform that is used for the induction of parcels into warehouse (inbound) and shipping distribution networks (outbound). The modular design gives you customizable options including sorting, dimensioning, labeling, barcode reading, and OCR reading.

The Chameleon Solution is available in sizes that can handle a wide variety of package sizes and weights at speeds that meet your processing needs. It organizes complex business logic into simple operator workflow, making it easy to act on the information you capture so you can respond precisely to your customers and the market.
